Building a Pathway to Student Learning Aug 03 2020 This book leads you through the process of designing a learning-centered course. It is written as a “how-to” handbook, providing step-by-step guidance on creating a pathway to student learning, including 26 workboxes (also available free online) that lead you through each element of the course design process and promote a rich reflection process akin to being in a workshop setting. The authors prompt you to (1) consider the distinctive characteristics of your students; (2) clearly articulate your course learning goals; (3) create aligned summative assessments; (4) identify the specific knowledge, skills, and attitudes students will need in order to be successful; (5) craft effective learning experiences, informed by the well-documented research on how people learn; and (6) incorporate formative assessment to ensure you and your students are staying on track. Completion of the sequence of worksheets leads to a poster as a visual display of your course design. This graphic depiction of your course ties the components together, provides a clear map of action for teaching your course, for modifying as you evaluate the success of particular strategies or want to introduce new concepts, and for developing your syllabus. A rubric for evaluating course posters is included. For faculty developers, this book provides a proven and ready-made resource and text around which to design or redesign learner-centered course design workshops or multi-day course design retreats, replicating or modifying the renowned workshop that the authors have developed at the Air Force Academy for both faculty new to teaching and those with many years of teaching experience under their belt.

Generations, Political Participation and Social Change in Western Europe Sep 16 2021 This new comparative analysis shows that there are reasons to be concerned about the future of democratic politics. Younger generations have become disengaged from the political process. The evidence presented in this comprehensive study shows that they are not just less likely than older generations to engage in institutional political activism such as voting and party membership - they are also less likely to engage in extra-institutional protest activism. *Generations, Political Participation and Social Change in Western Europe* offers a rigorously researched empirical analysis of political participation trends across generations in Western Europe. It examines the way in which the political behaviour of younger generations leads to social change. Are younger generations completely disengaged from politics, or do they simply choose to participate in a different way to previous generations? The book is of key interest to scholars, students and practitioners of political sociology, political participation and behaviour, European Politics, Comparative Politics and Sociology.

Classroom Assessment and the National Science Education Standards Apr 30 2020 The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading-and how it fits into the larger, comprehensive assessment system.

Later, the teacher is dismayed when many of the students fail a test on the material. Why aren't students getting it? And, just as important, why didn't the teacher recognize the problem? Teaching, Learning and Scaffolding in CLIL Science Classrooms Nov 25 2019 This edited volume presents a collection of empirical studies examining the teaching and learning processes in science classrooms in Content and Language Integrated Learning (CLIL) contexts. It is a timely contribution to the rapidly growing body of CLIL research in response to scholars' consistent calls for more classroom-based research on the issues in integration of content and language teaching in lessons. With the dual goal of content and language learning, students in CLIL programmes are also facing double challenges – mastery of abstract, cognitively demanding content knowledge and unfamiliar academic language. Focusing on the notion of "scaffolding", this edited volume demonstrates how science teachers can provide appropriate and timely scaffolding for their students to overcome the challenges in CLIL science classrooms. With studies from different educational settings (Hong Kong, Mainland China, Singapore and Australia) and epistemological paradigms, and adopting a variety of research designs, this volume will provide key insights into CLIL pedagogy and teacher education. Originally published as special issue of Journal of Immersion and Content-Based Language Education 7:2 (2019).

Handbook of Research on Transforming Teachers' Online Pedagogical Reasoning for Engaging K-12 Students in Virtual Learning Aug 15 2021 The COVID-19 pandemic drastically transformed the classroom by keeping students

and teachers apart for the sake of safety. As schools emptied, remote learning rapidly expanded through online services and video chatrooms. Unfortunately, this disrupted many students and teachers who were not accustomed to remote classrooms. This challenge has forced K-12 teachers to think differently about teaching. Unexpectedly and with little time to prepare, they have been confronted with redesigning their curriculum and instruction from face-to-face to online virtual classrooms to protect students from the COVID-19 virus while ensuring that these new online initiatives remain sustainable and useful in the post-pandemic world. As teachers learn to take advantage of the affordances and strengths of the multiple technologies available for virtual classroom instruction, their instruction both in online and face-to-face will impact what and how students learn in the 21st century. The Handbook of Research on Transforming Teachers' Online Pedagogical Reasoning for Engaging K-12 Students in Virtual Learning examines the best practices and pedagogical reasoning for designing online strategies that work for K-12 virtual learning. The initial section provides foundational pedagogical ideas for constructing engaging virtual learning environments that leverage the unique strengths and opportunities while avoiding the weaknesses and threats of the online world. The following chapters present instructional strategies for multiple grade levels and content areas: best practices that work, clearly describing why they work, and the teachers' pedagogical reasoning that supports online implementations. The chapters provide ways to think about teaching in virtual environments that can be used to guide instructional strategy choices and recognizes the fundamental differences between face-to-face and virtual environments as an essential design component. Covering such topics as K-12 classrooms, pedagogical reasoning, and virtual learning, this text is perfect for professors, teachers, students, educational designers and developers, instructional technology faculty, distance learning faculty, and researchers interested in the subject.
