[Industrial Process Plant Construction Estimating and Man-Hour Analysis](#) Mar 29 2022 Industrial Process Plant Construction Estimating and Man-Hour Analysis focuses on industrial process plants and enables the estimator to apply statistical applications, estimate data tables, and estimate sheets to use methods for collecting, organizing, summarizing, presenting, and analyzing historical man-hour data. The book begins with an introduction devoted to labor, productivity measurement, collection of historical data, verification of data, estimating methods, and factors affecting construction labor productivity and impacts of data. It goes on to explore construction statistics and mathematical spreadsheets, followed by detailed scopes of work ranging from coal-fired power plants to oil refineries and solar plants, among others. Man-hour schedules based on historical data collected from past installations in industrial process plants are also included as well as a detailed glossary, Excel and mathematical formulas, area and volume formulas, metric/standard conversions, and boiler man-hour tables. Industrial Process Plant Construction Estimating and Man-Hour Analysis aids industrial project managers, estimators, and engineers with the level of detail and practical utility for today's industrial operations and is an ideal resource for those involved in engineering, technology, or construction estimation. Identify quantity differences with the comparison method and eliminate impacts between proposed and previously installed equipment Understand how to implement statistical and estimating methods, scopes of work, man-hour tables and estimate sheets to produce direct craft man-hour estimates, RFPs, and field change orders Set up and utilize Excel templates to automate statistical functions that will perform mathematical applications key to process plant construction

[The Furnace of Affliction](#) Nov 24 2021 Focusing on the intersection of Christianity and politics in the American penitentiary system, Jennifer Graber explores evangelical Protestants' efforts to make religion central to emerging practices and philosophies of prison discipline from the 1790s through the 1850s. Initially, state and prison officials welcomed Protestant reformers' and ministers' recommendations, particularly their ideas about inmate suffering and redemption. Over time, however, officials proved less receptive to the reformers' activities, and inmates also opposed them. Ensuing debates between reformers, officials, and inmates revealed deep disagreements over religion's place in prisons and in the wider public sphere as the separation of church and state took hold and the nation's religious environment became more diverse and competitive. Examining the innovative New York prison system, Graber shows how Protestant reformers failed to realize their dreams of large-scale inmate conversion or of prisons that reflected their values. To keep a foothold in prisons, reformers were forced to relinquish their Protestant terminology and practices and instead to adopt secular ideas about American morals, virtues, and citizenship. Graber argues that, by revising their original understanding of prisoner suffering and redemption, reformers learned to see inmates' afflictions not as a necessary prelude to a sinner's experience of grace but as the required punishment for breaking the new nation's laws.

Residential Duct Systems - Manual D Oct 04 2022 The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.
