Health Literacy and Child Health Outcomes Apr 24 2022 This compact resource presents current data on health literacy as it affects child health outcomes, with a sharp focus on improving communication between healthcare providers and pediatric patients and their families. A frequently overlooked social determinant of health in children, health literacy is shown as a critical skill for patients and families and a key aspect of patient engagement. The authors' evidence-based survey pinpoints common problems in healthcare providers' verbal and written communication with pediatric patients, their parents, and/or caregivers. Readers will learn about practical health literacy strategies for addressing and preventing miscommunication at the individual and systems levels. These improvements are linked to immediate results (e.g., greater compliance, fewer medication errors) as well as improved long-term child health outcomes, including reduced health disparities and enhanced quality of life into adulthood. This transformative guide: Defines optimum health communication as necessary for working with all patients Identifies common barriers to clear health communication Traces the relationship between health literacy and child health outcomes, from the prenatal period and into young adulthood Offers guidelines for creating effective patient education materials and a safe, health literacy oriented patient-centered environment Integrates health literacy into health systems' quality improvement plans Health Literacy and Child Health Outcomes informs students in MPH programs as well as public health scientists and scholars, and can also serve as an introductory text for students in public health ethics or a general applied ethics course. Public health professionals in diverse contexts such as local health departments and nonprofit organizations will appreciate its robust approach to ethical practice, professional development, and systems improvement. This will be a helpful guide for introducing health communication topics in medical education and allied health. Lastly, clinicians taking care of pediatric patients will find concise information and practical advice to apply in the clinical setting.

Maternal and Child Health May 26 2022 Our current era of globalization, war, and socioeconomic unrest has revealed public health as a worldwide concern and a major frontier for social justice with maternal and child health at its epicenter. Yet, there has been a relative scarcity of training resources specifically dedicated to this crucial area. "Maternal and Child Health: Global Challenges, Programs, and Policies" addresses this gap in current knowledge by analyzing the range of socioeconomic and environmental factors, health care disparities, politics, policies, and cultural practices that impact the health and safety of mothers, as well as the well-being and optimum development of their children. Individual sections focus on unequal distribution of the world's resources, politics and power, specific disease concerns, programs, policies and emerging concerns with a focus on what is currently being done, and what needs to be done to improve the health status of women, children, and adolescents. The book's contributors are some of the world's most respected experts, carefully selected to represent different global geographic regions and diverse professional disciplines related to maternal and child health from both academic and field practice

perspectives. Among the topics in this authoritative volume: The impact of war, globalization, gender inequity, and harmful traditional practices (e.g., female genital mutilation). Specific health concerns, including tuberculosis, malaria, HIV, and malnutrition. Child and adolescent health issues, from abuse and neglect to children in difficult circumstances. Pregnancy-related issues: safety, abortion and post-abortion care, teen pregnancy, and more. Strategies for planning, developing, and maintaining maternal and child health systems in developing countries. The status of global initiatives, such as Integrated Management of Childhood Illnesses and the Millennium Development Goals. The status of evidence-based maternal and child health in the developing world. With such a wealth of information on both practical and conceptual levels, "Maternal and Child Health: Global Challenges, Programs, and Policies" is as relevant to students and researchers in the field as it is to policy makers and those working for global health and development organizations. It also makes an excellent stand-alone text for courses in global health in general and global maternal and child health in particular.

Global Child Health Jul 16 2021 This timely resource brings child health to the forefront of global health and the crucial goal of universal equity of care. Its resource-based framework offers contemporary perspective on factors driving child health disparities, specific vulnerabilities of underserved children, and ways readers can become effective advocates for children. The book critiques current child health policy worldwide, examining both policies that are helping to alleviate and are contributing to further inequities. And the authors provide an extensive toolkit to aid professionals in multidimensional screening for child, newborn, maternal, and post-natal health as well as socioeconomic determinants of health. Included in the coverage: · What is global health? · The current state of global child health and disparities · Global health disparities in high-resource settings · Pathologies disproportionately affecting the underserved · Policy and advocacy framework · Navigating the domestic resources (an advocate's well child check) Global Child Health will find a ready audience among child health providers (physicians, advanced practice providers, nursing staff, social workers, allied healthcare providers, public health professionals), medical educators (medical schools, departments of pediatrics, schools of public health, nursing schools and programs, schools of allied health), and child health policymakers (staff at USAID, Health and Human Services, health services researchers in child and global health policy, health advocacy-related nonprofit organizations).

Disease Control Priorities, Third Edition (Volume 8) Jan 28 2020 More children born today will survive to adulthood than at any time in history. It is now time to emphasize health and development in middle childhood and adolescence--developmental phases that are critical to health in adulthood and the next generation. Child and Adolescent Health and Development explores the benefits that accrue from sustained and targeted interventions across the first two decades of life. The volume outlines the investment case for effective, costed, and scalable interventions for low-resource settings, emphasizing the cross-sectoral role of education. This evidence base can guide policy makers in prioritizing actions to promote survival, health, cognition, and physical growth throughout childhood and adolescence.

Management of Child Health Programs in Developing Countries Aug 05 2020

Self Help Groups and Reproductive and Child Health Programme Dec 29 2019 The present work on the Role of Self Help groups in Strengthening Reproductive and Child Health Programme is a original piece of work combining the modern theories with age old values inherent in the society in which the programme was applied. It sets out to explore a model which helped the poor women to start their economic life with the help of micro finance in an innovative manner in the health sector. The processes, applied in the development of the programme, have helped in bringing out a Sustainable Reproductive and Child Health Programme through increasing use of RCH knowledge, capacity building, social capital formation, network building, continuous needs assessment and fulfillment and development of an intra-sectoral linkage for sustaining the programs which were started to bring about the changes in their life. Most importantly, this work highlights the methodology applied in maintaining the development efforts for improving the Reproductive and Child Health Programme.

Global Case Studies in Maternal and Child Health Jun 14 2021 Maternal and Child Health (MCH) continues to be one of the most important fields of study for improving the health of populations across the globe. Two the 10 Millennium Development Goals strive specifically to improve maternal and child health, and several others, such as gender equality and HIV/AIDS, are critical aspects of Maternal and Child Health. Written for students in public health, medical, and allied health professions, Global Case Studies in Maternal and Child Health brings to life theoretical and conceptual ideas discussed in primary texts, through the analysis of lived stories of maternal and child health programs around the world. Using structured case studies of community-based programs in maternal and child health from around the world, students will be presented with real-life ethical, practical and theoretical challenges that will develop critical and analytical thinking skills and also provide them with practice models that they can use in their future or present work.

*Disease Control Priorities, Third Edition (Volume 2) Mar 12 2021 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.*

*Paying Attention to Children in a Changing Health Care System Nov 27 2019 America's health care system is being reshaped by a variety of market-driven changes, and states are emerging as the major governmental influence on health care policy. Amid these changes, the health and well-being of children can slip from view. Although most children are fundamentally healthy, they require health care that emphasizes preventive services, such as immunizations and regular monitoring of physical and psychosocial growth and development. This volume takes a broad look at access and quality of care for pregnant women, children, and mothers. Among the issues addressed are the scope of benefits available under various health care reform efforts and services for special-needs children under managed care.*
