Reflective Organizations: On the Front Lines of QSEN & Reflective Practice Implementation, 2015 AJN Award Recipient Mar 05 2020 Today's healthcare environment is ever-evolving. This constant progression requires educators and practitioners to be nimble, flexible, and responsive to change. While individuals can be nimble and flexible, organizational culture is often stubbornly resistant. Changing the culture requires more than introducing new activities or tasks. In this follow-up to their highly regarded book—*Reflective Practice: Transforming Education and Improving Outcomes*—Gwen Sherwood and Sara Horton-Deutsch focus on reflective learning as a catalyst for transforming traditional organizations and environments. The authors make a strong case that the way organizations incorporate change into their

culture or processes ultimately affects sustainability. *Reflective Organizations: On the Front Lines of QSEN & Reflective Practice Implementation* promotes a systematic change that supports nurses and educators in learning from experiences in order to craft future change. If you want to know how to begin, what to expect, and how others have addressed the familiar challenges of the change process, this book will serve as your guide.

Exploring Studbooks for Wildlife

Management and Conservation Jul 09 2020

Many endangered species of wild animals are managed in captivity through studbooks. In this book these data-rich resources are mined in innovative, integrated and statistically tested ways to maximise information gain for conservation practice - whether for captive or released/reintroduced or managed wild populations. This book is thus an important tool for all species managers, and for students and researchers in small population biology and

wildlife conservation. The book's studbook analyses are grouped in three interrelated sections: natural history, demography and genetics. Statistical tests to determine the significance of results or to compare results between subgroups are undertaken throughout. Real studbooks of a variety of species, e.g. cranes, wolverines, blesbok, illustrate the practical applications and interpretations of the analyses and statistics. The "natural history" section presents analyses to determine baseline species information such as litter size, inter-birth interval, longevity and seasonality. "Demography" covers census(-style) analyses, age-class based life tables, comparative survival analyses and population projections. Solutions for dealing with small sample sizes are included. Inbreeding depression and unconscious selection form the main focus of the "genetics" section. Survival and life table analyses are used to assess inbreeding effects. Quantitative genetics methods are applied to natural history

traits as a tool to monitor genetic variation. A fourth section on "conservation" shows how data from captive populations can be used where natural history data from wild populations are missing. A real example uses studbook data to inform Population Viability Analysis. The final section deals with issues related to incomplete and missing data and statistical topics. The purpose-written open-source software programs "Population Management Library (PML)" and "studbookR" used for analyses in the book, are available at www.princee.com.

Red Panda Aug 10 2020 Red Panda: Biology and Conservation of the First Panda provides a broad-based overview of the biology of the red panda, *Ailurus fulgens*. A carnivore that feeds almost entirely on vegetable material and is colored chestnut red, chocolate brown and cream rather than the expected black and white. This book gathers all the information that is

available on the red panda both from the field and captivity as well as from cultural aspects, and attempts to answer that most fundamental of questions, "What is a red panda?" Scientists have long focused on the red panda's controversial taxonomy. Is it in fact an Old World procyonid, a very strange bear or simply a panda? All of these hypotheses are addressed in an attempt to classify a unique species and provide an in-depth look at the scientific and conservation-based issues urgently facing the red panda today. Red Panda not only presents an overview of the current state of our knowledge about this intriguing species but it is also intended to bring the red panda out of obscurity and into the spotlight of public attention. Wide-ranging account of the red panda (*Ailurus fulgens*) covers all the information that is available on this species both in and ex situ. Discusses the status of the species in the wild, examines how human activities impact on their habitat, and develops projections to translate

this in terms of overall panda numbers. Reports on status in the wild, looks at conservation issues and considers the future of this unique species. Includes contributions from long-standing red panda experts as well as those specializing in fields involving cutting-edge red panda research.
