Untangling the US Deficit Dec 30 2019 The authors examine the many reasons and theories that exist to explain the growth of the US external deficit and the concerns surrounding its financing,

particularly the alarming reliance on foreign central bank purchases. These, and various related issues, are analysed in a systematic and rigorous manner.

Applied Learning in Higher Education: Aug 25 2019 Today, “all institutions of higher education almost everywhere in the world have been influenced by the concept of globalisation. The resulting policy changes in each nation state have, of course, reflected the degree of the impact of globalisation on the country, hence the changes in higher education.” (Banya, 2005, p.147). This points to globalisation shaping knowledge production as well as the spread of intentional and continuous waves of innovation. The effects of globalisation on education can be seen through a) the changing paradigm from a closed system to a more open system, and b) the changing approach from a teacher-centred learning environment to that of a learner-centred environment. This changing approach culminates in the broader ideas of ‘applied learning’ through a) a productive view of learning versus reproductive view of learning, b) constructivist versus behaviourist, c) learning facilitation versus teaching, and d) process-based assessment versus outcome-based assessment (Rudic, 2016).

What We Owe Each Other Jun 03 2020 **LOGLISTED FOR THE 2021 FT / McKinsey BUSINESS BOOK OF THE YEAR AWARD** One of the world's most influential economists sets out the basis for a new social contract fit for the 21st century. 'Excellent... Shafik points us toward...a hopeful framework for social, economic and political renewal' Michael J. Sandel _____ What does society owe each of us? And what do we owe in return? Our answer to these inescapable questions - known as the social contract - shapes our politics, economic systems and every stage of life, from raising children and going to school to finding work and growing old. Yet today, many believe that this contract is not working for them. Economist Minouche Shafik examines societies across the world and demonstrates that the urgent challenges of technology, demography and climate require a major shift in priorities. This vision-changing book shows us the way to a new model that provides mutual security and opportunity - a social contract fit for the twenty-first century. _____ 'Intelligent and lucid' Martin Wolf, Financial Times 'A powerful and persuasive moral argument...rigorous and specific enough to help readers think practically about the policies needed' Melinda Gates 'A necessary contribution at a turning-point in history... A must-read' Ursula von der Leyen **A PROSPECT MAGAZINE BEST BOOK OF 2021**

How to Write about Economics and Public Policy Apr 13 2021 *How to Write about Economics and Public Policy* is designed to guide graduate students through conducting, and writing about, research on a wide range of topics in public policy and economics. This guidance is based upon the actual writing practices of professional researchers in these fields and it will appeal to practitioners and students in disciplinary areas such as international economics, macroeconomics, development economics, public finance, policy studies, policy analysis, and public administration. Supported by real examples from professional and student writers, the book helps students understand what is expected of writers in their field and guides them through choosing a topic for research to writing each section of the paper. This book would be equally effective as a classroom text or a self-study resource. Teaches students how to write about qualitative and quantitative research in public policy and economics in a way that is suitable for academic consumption and that can drive public policy debates Uses the genre-based approach to writing to teach discipline-appropriate ways of framing problems, designing studies, and writing and structuring content Includes authentic examples written by students and international researchers from various sub-disciplines of economics and public policy Contains strategies and suggestions for textual analysis of research samples to give students an opportunity to practice key points explained in the book Is based on a comprehensive analysis of a research corpus containing 400+ research articles in various areas of public policy and economics

The Rise and Fall of Money Growth Targets as Guidelines for U.S. Monetary Policy Mar 01

2020 A familiar question raised by the Federal Reserve System's evolving use of money growth targets over the past twenty years is whether monetary policymakers had sound economic reasons for changing their procedures as they did -- either in adopting money growth targets in the first place, or in subsequently abandoning them, or in both instances. This paper addresses that question by comparing two kinds of evidence based on U.S. time-series data: first, evidence bearing on what Federal Reserve policymakers should have known about the relationship of money to income and prices, and when they should have known it; and second, evidence showing how and when the Federal Reserve changed its actual (as opposed to stated) reliance on money growth targets. The main conclusion from this comparison is that whatever economic conditions might have warranted reliance on money growth targets in the 1970s and early 1980s had long disappeared by the 1990s, so that abandoning these targets was an appropriate response to changing circumstances. Whether adopting money growth targets earlier on was likewise appropriate is less clear.

The Contributions of Infrastructure to Economic Development Jan 11 2021 This paper reviews the linkages between infrastructure and economic development based on both formal empirical research and informal case studies. The main thesis is that economic benefits result from investments in infrastructure only to the extent that they generate a sustainable flow of services valued by consumers. Thus, an analysis of infrastructures' contributions to growth must look at the impacts of services as actually perceived, not at indirect indicators that measure only aggregate provision of infrastructure capital. The paper notes that macro and industry level research, although having its limitations, suggest a positive and statistically significant relationship between infrastructure and economic output. However the conclusions derived from this research (most of which derives from developed countries) provide little specific guidance for policy. To gain more practical insights about how infrastructure contributes to economic growth and to improved quality of life, and to understand the welfare costs of inadequate or unreliable infrastructure, it is necessary to look at microeconomic evidence. Particularly interesting illustrations of these relationships are to be found in developing countries where there is wide variance in the availability and quality of infrastructure.

Japanese Banking and Investment in the United States Aug 06 2020 In this work, Rose provides a detailed study of the factors that motivate the current huge volume of Japanese banking and investment activity in the United States, and how the future status of that activity may affect American businesses and jobs. He examines the causes of this movement--the appreciation of the yen, Japan's trade surpluses, low barriers to entry in U.S. markets--as well as the higher interest rates, unemployment, and slowing of U.S. output that could result from a reduction in Japanese activity. Also included is a useful overview of the banking and financial system of Japan.

Proliferation of Open Government Initiatives and Systems May 03 2020 As is true in most aspects of daily life, the expansion of government in the modern era has included a move to a technologically-based system. A method of evaluation for such online governing systems is necessary for effective political management worldwide. Proliferation of Open Government Initiatives and Systems is an essential scholarly publication that analyzes open government data initiatives to evaluate the impact and value of such structures. Featuring coverage on a broad range of topics including collaborative governance, civic responsibility, and public financial management, this publication is geared toward academicians and researchers seeking current, relevant research on the evaluation of open government data initiatives.

Inflation Targeting and the Inflation Process Jan 29 2020 In an open economy inflation-targeting framework, whether policy-makers should target aggregate or non-traded inflation depends on the structural relationships in the economy. This paper shows that in a small empirical model of the Australian economy, it makes little difference which measure is targeted. This conclusion is reinforced by the significant changes to the inflation process that the paper suggests have occurred over the past two decades: the effect of exchange rate changes on inflation appears to have become more muted and the inflation process appears to have become better anchored.

IMF Working Paper Oct 08 2020

Assessing Reserve Adequacy - Specific Proposals Sep 26 2019 Reserves have a central place in the policy tool kit of most economies, providing insurance against shocks. In conjunction with sound policies, they can help reduce the likelihood of balance of payment crises and preserve economic and financial stability. Reserves, however, can result from both precautionary and non-precautionary policy objectives and institutional settings. While they can bring several important benefits, reserve holdings can sometimes be costly. This paper brings together recent Fund work on reserve adequacy issues aiming to strengthen their discussion in bilateral surveillance. Despite the ongoing debate on reserve issues, there is little consensus about how to assess reserve holdings in different economies, even though this is an important aspect of a member's external stability assessment. The work stream of which this paper is part aims to fill this gap by outlining a framework for discussing reserve adequacy issues in different economies. In this regard, the paper also forms part of the Fund's response to the 2012 IEO evaluation of the Fund's advice related to international reserves, which recommended, inter alia, that assessments of international reserves in bilateral surveillance reports should be more detailed and reflect country circumstances. To this end, the paper proposes that, where warranted, individual country Article IV reports include a fuller discussion of the authorities' stated objectives (precautionary and non-precautionary) for holding reserves, an assessment of the reserve needs for precautionary purposes, and a discussion of the cost of reserves. The aim would be to ensure evenhandedness

so that countries with similar circumstances are assessed in similar ways, while allowing the depth and emphasis of this discussion to vary depending on country conditions and needs
